

SSL Support

Ad Peeps supports SSL when serving ads. You may have a website that uses an SSL certificate for example to show a banner ad of products in services in a shopping cart or secure web application.

In order to show your ads using SSL when using our domain (ie adpeepshosted.com) simply change `http://www.adpeepshosted.com` to `https://www.adpeepshosted.com`.

If you use a subdomain to point to us through a CNAME alias the setup is slightly different. You will not be able to use `https://ads.YOURDOMAIN.com` because the site and certificate is actually hosted on our web servers and our servers are configured for `www.adpeepshosted.com` only.

To use SSL in this setup, edit the html code to point to `https://www.adpeepshosted.com` in the image call sections only. The software will show the ad with our SSL but the href link your users click will be back to your subdomain.

Example:

```
<p align="center">
<script type="text/javascript"
src="https://www.adpeepshosted.com/adpeeps.php?bf=showad&uid=100000&bmode=off&gpos=center&bzone=adpeeps.com&bsize=all&btype=3&bpos=default&btotal=1&btarget=_blank&bborder=0"></script><noscript><a
rel="nofollow"
href="http://ads.yourdomain.com.com/adpeeps.php?bf=go&uid=100000&bmode=off&bzone=adpeeps.com&bsize=all&btype=1&bpos=default"
target="_blank"></a></noscript></p>
```
